Computer Processing of Remotely-Sensed Images: An Introduction Paul M. Mather, Magaly Koch

This fourth and full colour edition updates and expands a widely-used textbook aimed at advanced undergraduate and postgraduate students taking courses in remote sensing and GIS in Geography, Geology and Earth/Environmental Science departments. Existing material has been brought up to date and new material has been added. In particular, a new chapter, exploring the two-way links between remote sensing and environmental GIS, has been added.

New and updated material includes:

- A website at www.wiley.com/go/mather4 that provides access to an updated and expanded version of the MIPS image processing software for Microsoft Windows, PowerPoint slideshows of the figures from each chapter, and case studies, including full data sets,
- Includes new chapter on Remote Sensing and Environmental GIS that provides insights into the ways in which remotely-sensed data can be used synergistically with other spatial data sets, including hydrogeological and archaeological applications,
- New section on image processing from a computer science perspective presented in a non-technical way, including some remarks on statistics,
- New material on image transforms, including the analysis of temporal change and data fusion techniques,
- New material on image classification including decision trees, support vector machines and independent components analysis, and
- Now in full colour throughout.

This book provides the material required for a single semester course in Environmental Remote Sensing plus additional, more advanced, reading for students specialising in some aspect of the subject. It is written largely in non-technical language yet it provides insights into more advanced topics that some may consider too difficult for a non-mathematician to understand. The case studies available from the website are fully-documented research projects complete with original data sets. For readers who do not have access to commercial image processing software, MIPS provides a licence-free, intuitive and comprehensive alternative.

From reader reviews:

Jose Longoria:

The book Computer Processing of Remotely-Sensed Images: An Introduction can give more knowledge and also the precise product information about everything you want. So why must we leave the best thing like a book Computer Processing of Remotely-Sensed Images: An Introduction? A number of you have a different opinion about reserve. But one aim in which book can give many facts for us. It is absolutely correct. Right now, try to closer with your book. Knowledge or facts that you take for that, you can give for each other; you can share all of these. Book Computer Processing of Remotely-Sensed Images: An Introduction has simple shape nevertheless, you know: it has great and large function for you. You can look the enormous world by wide open and read a e-book. So it is very wonderful.

Howard Foster:

This Computer Processing of Remotely-Sensed Images: An Introduction book is absolutely not ordinary book, you have it then the world is in your hands. The benefit you have by reading this book is actually information inside this e-book incredible fresh, you will get info which is getting deeper a person read a lot of information you will get. That Computer Processing of Remotely-Sensed Images: An Introduction without we comprehend teach the one who studying it become critical in contemplating and analyzing. Don't end up being worry Computer Processing of Remotely-Sensed Images: An Introduction can bring any time you are and not make your bag space or bookshelves' come to be full because you can have it in your lovely laptop even mobile phone. This Computer Processing of Remotely-Sensed Images: An Introduction having excellent arrangement in word along with layout, so you will not truly feel uninterested in reading.

Pearlie Wong:

Spent a free a chance to be fun activity to complete! A lot of people spent their free time with their family, or all their friends. Usually they accomplishing activity like watching television, going to beach, or picnic within the park. They actually doing same thing every week. Do you feel it? Would you like to something different to fill your own free time/ holiday? Can be reading a book might be option to fill your free of charge time/ holiday. The first thing that you will ask may be what kinds of reserve that you should read. If you want to try out look for book, may be the book untitled Computer Processing of Remotely-Sensed Images: An Introduction can be fine book to read. May be it can be best activity to you.

Herbert Knight:

People live in this new day time of lifestyle always try to and must have the free time or they will get wide range of stress from both daily life and work. So , if we ask do people have spare time, we will say absolutely yes. People is human not just a robot. Then we inquire again, what kind of activity have you got when the spare time coming to an individual of course your answer can unlimited right. Then ever try this one, reading books. It can be your alternative in spending your spare time, the particular book you have read

is actually Computer Processing of Remotely-Sensed Images: An Introduction.
