In 1953, James Watson and Francis Crick discovered the double helix structure of DNA. The discovery was a profound, Nobel Prize-winning moment in the history of genetics, but it did not decipher the messages on the twisted, ladderlike strands within our cells. No one knew what the human genome sequence actually was. No one had cracked the code of life. Now, at the beginning of a new millennium, that code has been cracked. Kevin Davies, founding editor of the leading journal in the field, "Nature Genetics," has relentlessly followed the story as it unfolded, week by week, for ten years. Here for the first time, in rich human, scientific, and financial detail, is the dramatic story of one of the greatest scientific feats ever accomplished: the mapping of the human genome. In 1990, the U.S. government approved a 15-year, \$3 billion plan to launch the Human Genome Project, whose goal was to sequence the 3 billion letters of human DNA. At the helm of the project was James Watson, who resigned after only a couple of years, following a feud with National Institutes of Health (NIH) Director Bernadine Healy over gene patenting. His successor was the brilliant young medical geneticist Francis Collins, who had made his name discovering the gene for cystic fibrosis. As Davies reports, Collins is a devout Christian who has traveled to Africa to work in a missionary hospital. He believes the human genome sequence is "the language of God." Just as Collins became project director, J. Craig Venter, a maverick DNA sequencer and Vietnam veteran, was leaving the NIH to start his own private research institute. Venter had developed a simple "shotgun" strategy for sequencing DNA, and his fameskyrocketed when his new institute proved his sequencing system worked by becoming the first to sequence the entire genome of a microorganism. Only 3 percent of the human genome had been sequenced by early 1998, the public project's halfway point. That same year, Venter was approached by PE Corporation to launch a private human genome project. He stunned the world when he announced the formation of a new company to sequence the human genome in a mere three years for \$300 million. A war of words broke out between public and private researchers. Undeterred, Venter built Celera Genomics with the motto "Speed matters. Discovery can't wait." and an \$80 million supercomputer. While the insults intensified, Celera's stock price soared, tumbled, and soared again. Negotiations for cooperation between the public and private institutes began, only to fall apart in acrimony. Then in the spring of 2000 President Clinton stepped in, telling his science adviser to restart negotiations. History was about to be made. Davies captures the drama of this momentous achievement, drawing on his own genetics expertise and interviews with key scientists including Venter and Collins, as well as Eric Lander, an MIT computer wizard who refers to the public genome project as "the forces of good"; Kari Stefansson, the genetics entrepreneur who is remaking Iceland's economy; and John Sulston, chief of the UK genome project, who led the charge against gene patenting. Davies has visited geneticists around the world to illustrate a vast international enterprise working on the frontier of human knowledge. "Cracking the Genome" is the definitive account of how the code that holds the answers to the origin of life, the evolution of humanity, and the future of medicine was broken.

Joseph Asher:

The book Cracking The Genome: Inside The Race To Unlock Human Dna give you a sense of feeling enjoy for your spare time. You may use to make your capable considerably more increase. Book can being your best friend when you getting anxiety or having big problem using your subject. If you can make reading a book Cracking The Genome: Inside The Race To Unlock Human Dna to become your habit, you can get considerably more advantages, like add your own personal capable, increase your knowledge about some or all subjects. You are able to know everything if you like start and read a reserve Cracking The Genome: Inside The Race To Unlock Human Dna. Kinds of book are a lot of. It means that, science book or encyclopedia or some others. So , how do you think about this book?

Leslie Bergeron:

Hey guys, do you wants to finds a new book to read? May be the book with the headline Cracking The Genome: Inside The Race To Unlock Human Dna suitable to you? Typically the book was written by well-known writer in this era. The particular book untitled Cracking The Genome: Inside The Race To Unlock Human Dnais a single of several books which everyone read now. This specific book was inspired a number of people in the world. When you read this e-book you will enter the new way of measuring that you ever know before. The author explained their idea in the simple way, and so all of people can easily to be aware of the core of this e-book. This book will give you a great deal of information about this world now. So you can see the represented of the world in this book.

Christine Furst:

The reserve with title Cracking The Genome: Inside The Race To Unlock Human Dna contains a lot of information that you can study it. You can get a lot of advantage after read this book. That book exist new information the information that exist in this reserve represented the condition of the world now. That is important to yo7u to understand how the improvement of the world. This particular book will bring you in new era of the internationalization. You can read the e-book on your smart phone, so you can read this anywhere you want.

Angelica Adams:

You are able to spend your free time to read this book this reserve. This Cracking The Genome: Inside The Race To Unlock Human Dna is simple to bring you can read it in the area, in the beach, train in addition to soon. If you did not have got much space to bring often the printed book, you can buy the particular e-book. It is make you better to read it. You can save the book in your smart phone.
