Non-Covalent Interactions: Theory and Experiment (RSC Theoretical and Computational Chemistry Series)

Pavel Hobza, Klaus Müller-Dethlefs

Non-Covalent Interactions: Theory and Experiment (RSC Theoretical and Computational Chemistry Series) Pavel Hobza, Klaus Müller-Dethlefs

The aim of this book is to provide a general introduction into the science behind non-covalent interactions and molecular complexes using some important experimental and theoretical methods and approaches. It is the first monograph on this subject written in close collaboration between a theoretician and an experimentalist which presents a coherent description of non-covalent interactions viewed from these two perspectives. The book describes the experimental and theoretical techniques, and some results obtained by these, which are useful in conveying the principles underlying the observable or computable properties of molecular clusters. The chemical and physical background underlying non-covalent interactions are treated comprehensively and non-covalent interactions is contrasted to ionic, covalent and metallic bonding. The role of dispersion and electrostatic interactions, static and induced multipole moments, charge transfer and charge localisation and de-localisation are described. In addition, the nomenclature and classification of non-covalent interactions and molecular clusters is discussed since there is still no unique agreement on it. The authors were among first who coined the term non-covalent for intermolecular interactions and all interactions can thus be categorised as metallic, covalent and non-covalent. The book covers covalent bonding where the properties of a moiety in a molecular cluster are concerned, for instance its electrostatic multipole moments. The historic development of the field is also briefly outlined, starting from van der Waals who first recognized the fact that molecules in the gas phase interact, through London who explained the fact that non-polar uncharged systems attract each other, making a connection to modern work of theoreticians and experimentalists who have contributed to the present knowledge in the field. The role of non-covalent interactions in nature is discussed and the book also argues why non-covalent interactions and not covalent ones play a key role in biological systems. The authors show the unique significance of non-covalent interactions in biological systems and describe several important processes (molecular recognition, structure of biomacromolecules, etc) that are fundamentally determined by non-covalent interactions. The book is aimed at undergraduate and graduate students who need to learn more about non-covalent interactions and their role in chemistry, physics and biology. It also provides valuable information to non-specialist scientists and also those who work in the area who will find it interesting reading. As both experimental and theoretical procedures are covered, this enables the reader to orientate themselves in this very intensely growing area.

From reader reviews:

Linda Spaulding:

Do you one of people who can't read gratifying if the sentence chained inside straightway, hold on guys this aren't like that. This Non-Covalent Interactions: Theory and Experiment (RSC Theoretical and Computational Chemistry Series) book is readable by means of you who hate the perfect word style. You will find the info here are arrange for enjoyable studying experience without leaving also decrease the knowledge that want to offer to you. The writer connected with Non-Covalent Interactions: Theory and Experiment (RSC Theoretical and Computational Chemistry Series) content conveys objective easily to understand by lots of people. The printed and e-book are not different in the information but it just different as it. So , do you nonetheless thinking Non-Covalent Interactions: Theory and Experiment (RSC Theoretical and Computational Chemistry Series) is not loveable to be your top listing reading book?

Maritza Kress:

Does one one of the book lovers? If so, do you ever feeling doubt when you find yourself in the book store? Try and pick one book that you just dont know the inside because don't determine book by its deal with may doesn't work this is difficult job because you are frightened that the inside maybe not because fantastic as in the outside appearance likes. Maybe you answer could be Non-Covalent Interactions: Theory and Experiment (RSC Theoretical and Computational Chemistry Series) why because the excellent cover that make you consider about the content will not disappoint you actually. The inside or content is actually fantastic as the outside or perhaps cover. Your reading 6th sense will directly direct you to pick up this book.

Madeline Cecil:

A lot of publication has printed but it differs. You can get it by world wide web on social media. You can choose the best book for you, science, comedian, novel, or whatever by simply searching from it. It is known as of book Non-Covalent Interactions: Theory and Experiment (RSC Theoretical and Computational Chemistry Series). Contain your knowledge by it. Without causing the printed book, it could add your knowledge and make you actually happier to read. It is most significant that, you must aware about e-book. It can bring you from one destination for a other place.

Michelle Morrow:

E-book is one of source of information. We can add our information from it. Not only for students but also native or citizen want book to know the up-date information of year for you to year. As we know those publications have many advantages. Beside most of us add our knowledge, also can bring us to around the world. By the book Non-Covalent Interactions: Theory and Experiment (RSC Theoretical and Computational Chemistry Series) we can acquire more advantage. Don't that you be creative people? For being creative person must love to read a book. Simply choose the best book that appropriate with your aim. Don't possibly be doubt to change your life with this book Non-Covalent Interactions: Theory and Experiment (RSC

Theoretical and Computational Chemistry Series). You can more attractive than now.
